

Waste Management

It is Boon Building Services Limited Policy that in the execution of operations we will identify, extract, segregate and dispose of wastes produced in a diligent and responsible manner and with regard to :

- Optimising opportunities to reduce, reuse and recycle waste materials including discarded packaging.
- Diverting waste streams from Landfill and non-productive incineration, wherever practicable.
- Employing efficient process and construction methods to maximise waste recovery and appropriate to net waste worth.
- Ensuring that waste materials are separated, stored, handled and transported safely and their specification is preserved without risk of contamination.
- Managing the efficient use of energy and conserving natural resources in the production and processing of waste materials.
- Reducing the environmental impact associated with our activities.
- Minimising disturbance and inconvenience caused by our operations to local communities.
- Meeting all legal, regulatory and other requirements relating to, or associated with, the generation and disposition of waste materials.

To deliver against this Policy Boon will ensure that:

- It is communicated to and understood by all working for and on our behalf.
- Our teams are trained to achieve high competence levels in best practices with particular emphasis upon the waste management chain.
- Our environmental management is effective and focused upon performance improvement.
- We continually seek to advance operational techniques, supported by the development and implementation of innovative waste management solutions.

Matthew Boon
Managing Director
